AE20 should be the Ben Butler Mine waste pile. About due west (slightly south) of the Lucky Jack (AE15) 37.951835, -107.582407

Smelters could come off too.

Thanks Ryan,

That's fine from my end. It would be nice to get rid of the mine symbols and sample location symbols but keep the call out boxes for the sample location and add call out boxes for the mine names that are relevant to the sampling (see spreadsheet). Just a thought. Mills could be removed too.

Point being, it would be helpful if more of the terrain could be visible. And sediment stations.?

Apologies for all the unsolicited advice. Even I hate me...

Really quick and dirty Field map of the Mine Waste sample locations. I would like some more

time to refine this map.
